Mousetrapper®

LIFE CYCLE ASSESSMENT · END OF LIFE

Built to last. Ready for its next life.

A Mousetrapper is made to give you many comfortable working days. When it has finally done its job, most of it can become new material – as our life cycle assessment shows.

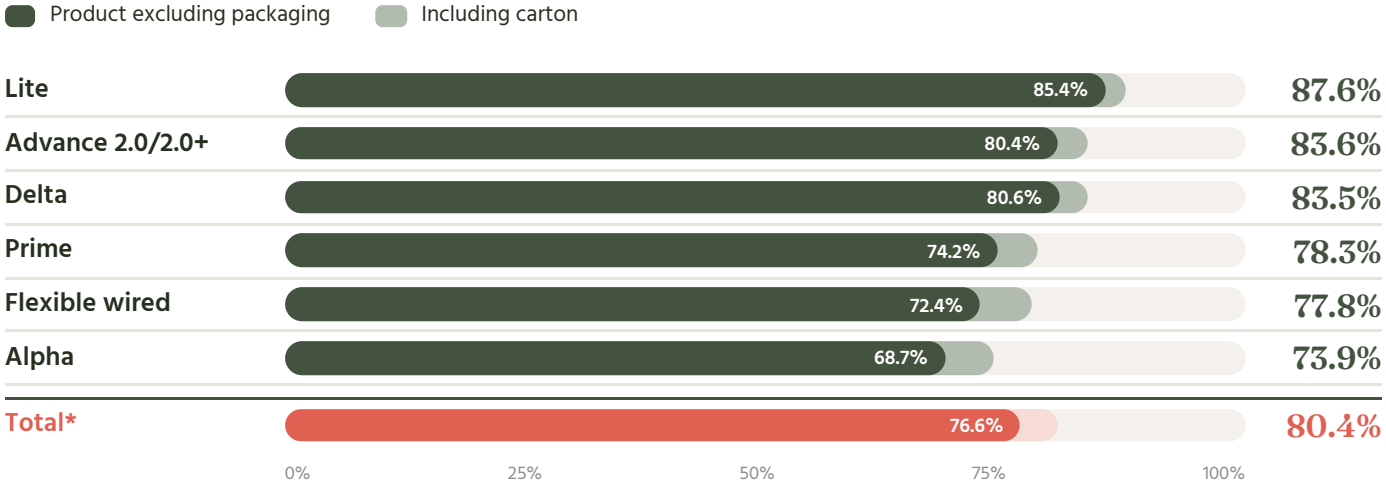

80.4%

of the range is recyclable, carton included*

RESULTS PER PRODUCT

How much can be recycled

Share of recyclable material per unit, calculated for the product itself and with the packaging carton included.

Recycled in, recyclable out

All Mousetrapper products are made from recycled plastic. The material has already had one life – and can have another.

Replace the part, keep the product

Advance 2.0, Prime and Delta have replaceable wrist pads. If a pad wears out, you replace just the pad – so the product can stay in use for longer.

Give it the right final stop

Take a worn-out Mousetrapper to electronics recycling and the carton to paper recycling. That is how the percentages become reality.

Made in Sweden – for people and the planet.

*Total refers to one unit of each model above. Source: Mousetrapper life cycle assessment (LCA). Figures show the share of the product's material that is recyclable, calculated excluding packaging and including the carton.
